

Freezing the frame for editing in KineMaster

5. You may now change the length of the freeze-frame and apply all of the effects.

To flip a frame, follow these steps.

1. Fill in the blanks with your photos and videos.
2. Go to the trim section on the right-hand toolbar.
3. Using the fourth option, divide, and create a freeze frame.
4. It's also possible to replicate the frame from the same component.
5. You may now adjust the freeze frame's length and apply all of the effects.

Trimming a video with KineMaster

Once your media has been added, click the check mark in the very top right corner. To trim our project, tap the video file available at the very bottom, and its border will turn into a yellow colour after some time. A scissor-shaped option may be found in the top left corner.
