

Supported audio formats

Let's have a look at the available formats before we get into the specifics of adding audio to KineMaster. PNC, WebP, JPEG, BMP, and GIF are among the image formats that can be imported. MP4, MOV, and 3GP are among the video formats available. Finally, WAV, AAC, M4A, and, of course, MP3 are all supported audio formats. You're almost ready to add music to your videos if you've installed the KineMaster application.

To begin, you'll need to download some free music files. You can upload a file from your phone in any of the permissible audio formats (tablet or phone). Don't stress if you don't have any recordings you'd like to add to KineMaster. You can get some free music from places like Soundcloud and YouTube Creator Studio.

Where can I get music files for free?

If you only want to modify videos for trial and do not want to utilize the video or audio for commercial purposes you are free to use whatever song you like. But, if you wish to utilize the video/audio on platforms such as YouTube, what should you do? Is it possible to post video/audio without violating copyright? Yes. The following is a list of a few places where you can get high-quality audio files for commercial use.

KineMaster Audio Selection

1. YouTube Creator Studio

YouTube does have its official music file repository, which anybody can use in their videos without worrying about copyright concerns. However,
