

KineMaster Sound Effects

Step 2: In the media panel, tap the Audio tab to select a music clip

By selecting the audio option from the right media panel, you can now import the music file. Check for the folder where you have the audio stored. You can tap on the song to preview it.

Here are the options available when you tap the Audio tab:

- **Music assets:** KineMaster offers free music for your video that you may download in this section.
- **SFX assets:** You may get tiny sound effects for your video here.
- **Recorded:** You can view all of the audio you've captured if you go to the Recorded tab.
- **Music:** You can see all of the songs on your device and select one from here.

That's all. You now have a layer of sound that you can change the length of by simply choosing it.

To add music, touch on the music file and then on the addition (+) symbol. After that, you're done. To save your changes, select the top right check mark (✓).

Step 3: Make any necessary changes

You may now make numerous edits or tweaks to your audio file. You may apply audio filters and change the compression of the sound to fit your
