

needs. You may make the audio track the backdrop music, or if it's shorter than the original video, you can have it on loop.

You can modify an audio track just like a video clip after it's included in your project. Audio can also be used using the Trim and Split tool.

The Mixer is at the heart of KineMaster's audio tools. You can get to it at any moment by selecting an audio track, then choosing Mixer in the options panel on the right of the screen. The Mixer tool in KineMaster allows you to modify the sound level on the left and right channels as well as adjust the track's loudness and pitch. That helps you to customize your audio even more. When you're finished, tap the checkmark to end the Mixer.

You can also use the EQ tool to change the sounds of the audio track. Tap on the audio track to access it. You will find it in the options panel with 12 different presets. These will let you adjust the high end, mid-tones, and bass of the sound. Try various tones to know which one will suit your audio track.

Further, you can also choose to narrate at different parts of the audio. Tap once on an empty area. Push the REC button. Check the place where you want the narration to be played and then move the Playhead to the exact time where you want to begin.

In this way, KineMaster will overlap your voice on the audio track. If the recording is okay and you have liked it, press the checkmark button to close the REC panel.
