

users understand how to overlay text supers and stickers and animate them. Let's get started.

Overlays in KineMaster are similar to clipart or stickers applied as a layer to a video clip. In overlays, emojis or emoticons are mostly used. However, a few overlays provide live activities such as blinking, morphing, and so on.

What is an overlay in KineMaster?

KineMaster enables you to use overlays to add small animated snippets to your videos. Overlays are placed on top of your source video footage as a layer. You can later add numerous animations, texts, effects, and pretty much customize your overlay to this layer as you like. You can also change the size of the overlay and move it around to whatever area you want.

In the free version of KineMaster, there are just two pre-installed overlays - the Neon Delights and Classic Stickers. A set of colorful animated stickers is included in the Neon Delights, which might be highly beneficial for some users. The classical stickers, on the other hand, are just a compilation of emojis and emoticons. Also, yes, you won't have to worry about overlays if you have a subscription because you can install many premium overlays.

How can you use KineMaster's overlay?

To use KineMaster Pro Video Editor's overlay feature, please follow the steps outlined below.

Step 1: Open KineMaster and add a few of your clips

You'll require a few video clips before you can start creating overlays. If you don't have any videos at present, you may still make a video clip out of any photograph you have. Both an image clip and a video clip will function with overlays.

Step 2: Open overlay menu

Select layer > Overlay from the drop-down menu (the interface changes). You may now choose any overlay you like or download more by pressing the "Get more" option. If you only want to apply an overlay quickly, touch on Neon Delights and choose any sticker from the collection. Your video will now have a large blank square box on it. It is empty because the animation hasn't yet been played. To put the overlay, hit on the upper right check mark (✓).

How to add text to your video?

You may pick from a variety of fonts, styles, and animations using Kin-
