

eMaster. Thus, you have complete control over how your text will get designed. Select layer > Text from the drop-down menu. You'll be prompted to type your content. Write the word you want to and touch the top right check mark (✓).

Step 3: Make all of the required changes to your overlay

You may customize your overlay by adding unique animations, text, and pretty much anything else to make it appropriate for your video.

Step 4: Take a look at your progress

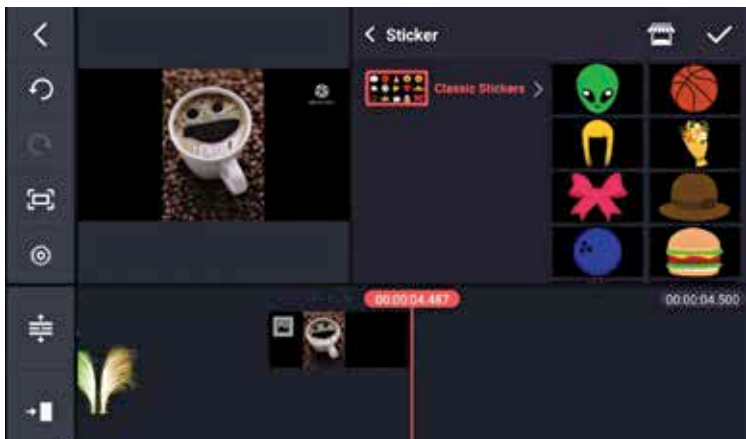

By pressing the play button, you can now get a preview of your video clip. After you've seen your movie, you'll have a better understanding of how KineMaster's overlay works. You may also incorporate music into your video to make it more interesting.

This is all you need to know about how to overlay text supers and stickers using KineMaster. The following section will discuss keyframes and how to use those with text supers or stickers to animate them.

Let's get started.

KineMaster's keyframes

The Keyframe Animation tool in KineMaster allows you to animate your layers. As the layer goes from point to point, you may change its direction, velocity, and alignment.

Keyframes
