

Blackmagic's Fusion 16 is the prime competitor for Adobe AE offering very high capabilities and competing at the top of the food chain.

editing, this can create world-class graphics and animations. It's supposedly the perfect tool for special effects artists and graphic designers.

2) APPLE MOTION

Apple Motion is to Final Cut Pro as Adobe After Effects is to Adobe Premiere Pro. Create motion graphics that can be taken straight into Final Cut Pro. Very similar to AE as it allows compositing, thereby enabling motion tracking, animation, video tracking, titles and other video special effects. It's simple enough to use and a great extension to Final Cut Pro.

3) FILMORAPRO

FilmoraPro has both free and paid versions. Its trump-card is that it's in a league of its own when it comes to creating animated titles and credits. Another deciding factor is that unlike Adobe After Effects and Apple Motion which have to work in conjunction with Adobe Premiere Pro and Apple Final Cut Pro, FilmoraPro is self sufficient and has its own in-house advanced editing modes complemented by detailed colour correction, effective audio noise reduction and inbuilt audio sync technology.

Throw customisable video effects into the fray and you have a very competent application. It's extremely user friendly with a good learning curve and a far less complex piece of software. It's available on both Windows and Mac.
