

7) Pricing

With both priced at the exact same rates, this is not a deciding factor but if you want to do everything and don't mind being average at some of the said things, then Premiere Pro is your jam.

The bottom-line is that while both softwares have overlapping utility, Premiere Pro is primarily a video editing software with some post production capabilities and similarly, After Effects is a compositing tool that can also edit videos. If you can afford to pay for the whole cloud package, the best decision would be to get the whole package as both softwares work better in tandem with each other rather than individually. Especially with Dynamic Link, videos can be effortlessly transferred to After Effects from Premiere Pro and all changes made in After Effects directly reflect in Premiere Pro without any loss of quality and additional effort. 

Premiere Pro – Hardcore Editing with limited visual effects capabilities

After Effects – Minimal editing with the best Visual effects on display.
