

The unsupported Video Driver error is a bummer but there is an option to continue with known issues... if you're brave enough

know you better. These involve who you are, what are you planning to use the app for and how proficient you already are with the software.

Once installed, Creative Cloud will take you to the After Effects page via a prompt on the top left.

Inside the app page, you can find a bunch of videos informational and tutorials to give you an overview and get you started.

To launch Adobe After Effects, click on the 'Open' button on the top right.

Right from the beginning, I had to deal with an unsupported driver problem. Clicking on 'Fix' takes you to help in the Adobe website. Apparently, drivers prior to NVIDIA driver 451.77 have a known issue which may lead to a crash. Once in the help, there are a couple of before you start steps that are recommended.

The first being creating a system image via the backup tab in the control panel. You can store the essential drives in an external hard disk preferably.
