

After which it is also recommended that you create a system repair disc. All the links are attached step by step and it's pretty straightforward. You should create the recovery drive on a separate pen drive, preferably small (4GB) as it formats the drive before turning it into a recovery drive. The whole process can take a few hours to complete.

The next step is to identify your NVIDIA GPU make and model, so you can start downloading the appropriate driver. You can do this by clicking on the GPU section under the Performance tab on the Task Manager. Then close all the Adobe applications which are open. The Nvidia Driver selection page transfers to the Download page once you enter the appropriate details.

After uninstalling the existing NVIDIA drivers and restarting my laptop several times, i was finally able to install the new NVIDIA drivers. The GeForce Experience requires a login to use but you don't really need to unless you plan on using NVIDIA's Shield for streaming games.
