

Some of the things you can do with the panels are:

- 1) Resize – Pretty convenient when you have a lot of material to work with and the preview size can be adjusted so as to not take up too much space.
- 2) Undock – Again, it is very convenient to not be confined to the default layout and makes using the software easier.
- 3) Placed next to each other – Further pushing the points of convenience and flexibility, they can also be placed next to each other in the same panel area!

(Be careful, not too play around too much though or you mind end up losing all your panels like I did. Just kidding, you can just reset your workspace by choosing: Window> Workspace> Reset to Saved Layout)

Compare this to the previous image and you can see that all the panels sizes have been modified

After the Panel introduction, the 3 step process is complete and you are either given the option to animate a logo or you can click on the displayed card to discover more tutorials. Let's proceed to create an animated Logo! Doing is the best way to learn and that's exactly what we're going to do. **d**
