

timelines in the Timeline panel for full freedom of customisability. In the 'Position' row of the Logo, there's a tiny blue diamond placed at the current time called 'keyframe'. A keyframe is sort of like the position of a point described with the X-coordinate and the Y-coordinate. Here, the keyframe is the point and the X and Y coordinates are the position and the time of the specific property of the object in question.

Keyframes are a fundamental part of making animations in After Effects. We use keyframes to change layers over time. Move the current time indicator (blue line in the timeline panel) to the one second mark (indicated

As you can see under the Logo timeline, upon expansion, each property has its own timeline.
