

by the blue marker in this tutorial). The Logo layer has to be selected as we need it to be the active layer. On the right of the Position feature are the X and Y Coordinates of the logo in the composition.

The vertical position needs to be changed to 516 to ensure the logo is back in the center (or you can drag it back to the center but it's a little harder to be precise this way). You can see that a new keyframe has been added at the one second mark in the positions timeline of logo.

What's cool about this is that After Effects actually adds a path of the logo on the screen, so you can see how the movement is going to be.

In this enlarged view of the Composition panel, you can see the logo in the bottom left (the selected portion) and a dotted line tracing its movement across screen at the one second mark.

You can preview the animation by moving the time indicator back to the start and pressing the Spacebar to see After Effects add some moves to the logo (this is done with the help of keyframes).

The logo flies in from the bottom to the top, which is pretty cool because this is my first ever animation ever!

Next is our first ever test – CHALLENGE ACCEPTED. Hey, but wait, what is the challenge?

Ze Challenge AE gives us a simple task of animating the logo to appear from the bottom of the screen to the top (Pft, no sweat, we just did that!) while also simultaneously fading in the logo text (APEAK) (That, is something we'll have to figure out how to do).

There's a couple of neat hints on the Learning tab to help you through this if you can't figure it out on your own but I recommend experimenting
