

If this happens, you will notice that a new tab has been opened in the top left of the Composition panel. All you need to do is either close the layer tab if you don't need it or click on the first tab which is the Composition tab.

3) The Project panel

This is pretty unambiguous as it contains all the project files in one location. It makes everything so much more uncomplicated by organising in folders and allowing easy re-arranging of elements.

The project panel is a very convenient panel to organise things and also to get information about the same. Let's find out how exactly it does this (refer to image below). Once you click on any item in the project panel, you will see that a small thumbnail is displayed at the top. This tiny thumbnail contains a ton of detail. For starters, the thumbnail will show what that particular element looks like if, provided it has a visual feature. And if the thumbnail is that of a video, you can see a small wave design below the thumbnail which is the audio signature of the video.

A simple screen grab of the Project panel

On the right of the thumbnail are more technical details:

- File track name
- Number of times this particular file has been used in this particular AE project
- The resolution of the element
- The dimensions of the element
- Frame rate of the element
- The data type/file type of the element

Another way to view all this useful data is to expand the projects panel (by moving the cursor over to the right edge of the panel, the cursor changes to a resizing shape which you will have to click and drag). Once you do this,
