

eye sore (unless of course, this is the effect you intended). Fixing the links ensures that this error is rectified and you have a clean composition again.

*(Disclaimer: When you try to import an image or illustration that is of a higher resolution than the per-existing composition, then it will be larger than the preview window and you might have to resize it or move it around.*

## 4) The Tools panel

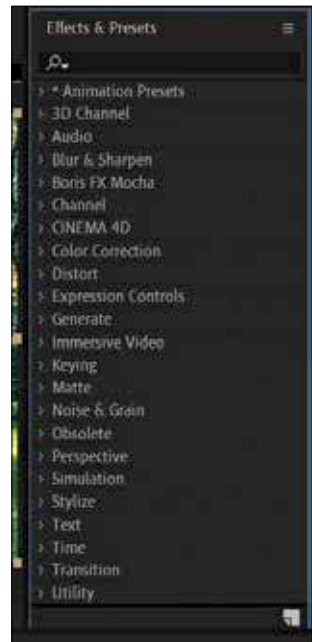

The Tools panel has a bunch of utility tools to make your job easier and has you feeling like Bob the Builder at times. Pretty handy!

A super useful panel that contains all the tools that we will need to use in After Effects. We can see the selected tool, highlighted in blue and intuitively, the cursor also transforms to any of the tools that we may select, making it easy to distinguish.

## 5) The Work panels

These panels are important for achieving a bunch of important results later on. These are just secondary though as we will be using them for specific functions and they don't have to be around like the other panels which we need to constantly tinker with. Some of these are: Audio, Blur and Sharpen (the effect we used earlier), Color Correction, Distort, Generate, Keying, Text, Time and Transition. Clicking on the drop down list will give you access to more options as each of these is a complete panel on its own. While the work panel contains all the panels that are present in AE, there is a less cluttered option if you

The Work panels which are utilised for highly specialised purposes but whose presence isn't constantly required.
