

A new Composition is indicated by the composition symbol which is a grey film icon with 3 RGB coloured shapes insides.

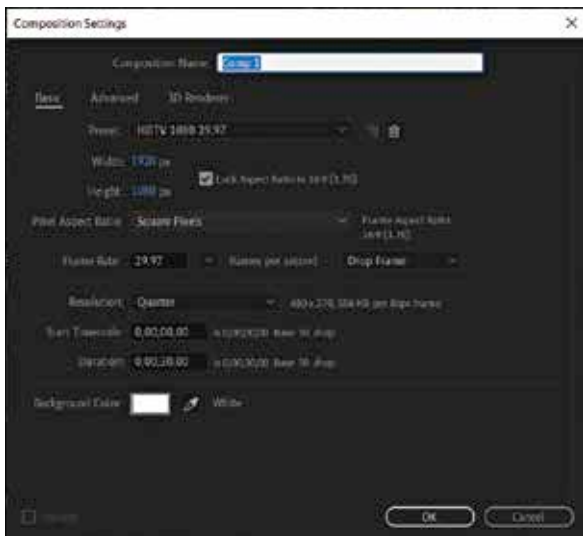

The interesting thing is that a whole composition can be imported into the timeline panel and to expand the composition, all you need to do is click on it and you'll see that a new tab opens up for that composition in the timeline panel.

The New Composition dialog box has quite a few features but the most important ones are:

1. Composition name
2. Aspect Ratio
3. Frame rate
4. Resolution
5. Duration
6. Background colour 

1. Composition tab (top red)
2. Composition symbol (bottom red)
3. Composition tab in the timeline panel
