

Creating shapes in After Effects

A must have skill in the arsenal of one wanting to master After Effects

There are a few different types of shapes you can create in After Effects and all of these have a star icon next to them (to identify that a particular layer is a shape layer):

1. Simple shapes (these are made using the shape builder tool directly)
2. Typed shapes (these are generally text that is typed out as a shape)
3. Edited shapes (what are these? These are small modifications (or big) made to simple shapes to make them a unique shape altogether)
