

4. Shapes from vectors (like shapes made in Adobe Illustrator)

CREATING SIMPLE SHAPES

Creating a simple shape as the title suggests is super simple. It involves using the Shape Builder tool which will be familiar to users of other Adobe applications like Photoshop and Illustrator. If you haven't used these applications though, it's still very simple, it's much like the shape tools you might have used in MS-Paint a few years back (or a few decades back).

In the Tools panel at the top of the screen, we have a bunch of tools to choose from. Let's first start out by clicking on the Rectangle shape builder. This one tool hosts a bunch of other options for building other shapes as well. You can view all of these options by clicking and holding the Rectangle shape option which will display other options like

- Rectangle Tool
- Rounded Rectangle Tool
- Ellipse Tool
- Polygon Tool
- Star Tool

The Rectangle shape builder is host to a bunch of other options which can be expanded by clicking on it and holding.

The two other options that you need to pay attention to are the Fill option and the Stroke option.

Clicking on the Fill option will open the Fill Option dialog box, which contains what type of filling you want to give your shape along with the

The fill and stroke option are both located to the right end of the Tool panel
