- Zig Zag

CREATING TYPE SHAPES

In After Effects, you can create 2 different types of files with text. On one hand, you can use the 'Type Tool' button (marked by a 'T' in the tools panel) to create a box wherein you can type text into the text box that you have created or you can change the properties of this text to modify each character in the text you have typed and use the individually as shapes.

Once you have created some text, you can see that Character section in the Work panel on the right hand side drops down. You can modify things like text size and colour from here among other thing.

After this, to turn the individual characters into shapes by themselves, select the text layer in the layer panel. Right click the layer name → Create → Create Shapes from Text.

There are fascinating implications to this. First off you will notice that there are 2 different layers with the same name. Tone Stark difference between these two layers is that even though they are of the same visual
