

Some tools we're gonna use to achieve this goal are the Pareto Principle, also known as the 80-20 Principle (quick summary; a pre historic study which concludes 80% of the results come from 20% of the work). We're aiming for efficiency, not perfection. Also helping us on this journey is Adobe (What!?!?, Adobe? How?). Yes, Adobe. We're going to work with the 1 Week Free Trial on the Adobe Website and make this a race against time. The stakes are high and the pressure is on. What happens in the end? We'll have to find out. But if this works, it's all the more exciting because now we know there's a faster way to learn the basics first and then we can choose how much time we spend on perfecting the details!

Hello AE!

After Effects is one of Adobe's more popular programs (among their 50+ offerings), that is primarily used in the video editing space for those of you that aren't familiar with the software. It's primarily a post production application which can be used for a variety of tasks including but not limited to graphics (specifically motion graphics), visual effects and compositing. It's a prime utility program in the entertainment space where almost all media is visually heavy and need to be attractive to the customers' eye (beauty does lie in the eyes of the 'ol beholder). Animated movies, full length features, cartoons, you name it and Adobe After Effects will be one of the applications used, if not 'the' application.

Some of the key functions that After Effects is used for is animation, tracking, compositing and keying. It also comes in really handy for adding and editing in music with a flexible timeline. It also acts as a direct transcoder for various other software and equipments. Not surprisingly, Adobe After Effects CC along with Adobe Photoshop CC have received recognition from the Academy of Motion Picture Arts and Sciences for their ground breaking and paradigm shifting contributions to the art and science of film-making. All the more humbling to understand just how massive the scope this software is and how daunting the task ahead is.

So, with this humongous and super exciting task ahead, let's embark on an adventure!
