

Blending and Masking

Modes that help add a bit of dynamism and depth to your creation

As the name it suggests, it is the blending of 2 modes together. To use blending modes, we need to first toggle the second icon in the bottom left of the timeline panel which is an overlapping circle and square. This activates the blending mode and you will see a new 'Mode' column in the panel. Clicking on this will expand the menu and you will see a lot of modes which are divided into 8 different categories:

- Normal (no blending occurs)
- Dark (removes the white and darkens)
