

and advanced. There's also grouped tutorials for Understanding Layers, Animating Essentials, Paint, Clone and Rotoscope Layering, Building and animating custom shapes, Isolating and Removing objects and exporting. This is topped of with some beginner tutorials, followed by more tutorials and some additional content on key topics.

- iii) **The User Guide** – Basically, an instruction manual for After Effects (but not optimised for speed learning, like our FastTrack.)

Glossary

- **AE** – (Adobe) After Effects
- **Blending** – It's a self explanatory term which means that 2 or more different layers are blended together. These layers can be anything ranging from images to videos to animations and even text.
- **CC** – (Adobe) Creative Cloud
- **Composition**– (abbr. Comp) It is a container that stores layers of audio, video, text, etc. Each composition is an independent timeline, so each one is a separate movie project.
- **Compositing** – Using elements from different images or videos to make it look cohesive as one image.
- **Glossary** – A list explaining unusual or uncommon terms to increase understanding on a particular subject using simpler terms
- **Keyframe** – It is a descriptive term that specifies the starting and ending parameters of any transition.
- **Layer** – Each element in the Timeline panel is called a layer, as it determines which element (or layer) is in the foreground and which is in the background.
- **Masking** – Masking is an advanced tool in After Effects that is used to reveal only certain parts of a layer by using another layer as a virtual mask.
- **Path** – When an object is animated to move in a certain way, it is usually done so with the help of a path to define its motion. It's present in the project but it can be toggled off in the output video.
- **Preset** – A bunch of different effects that Adobe has clubbed together in a cohesive manner to produce various effects that alter the output.
- **Render** – To convert to a form (or format), where it is made viewable and easily accessible outside of the application.
- **Vector** – Designs stored in mathematically formula so as to not lose data if the image is enlarged.
