

result in inconvenience. To tackle such rapidly emerging problems, the future of currencies lies in cryptocurrency. It is the need of the hour as it effectively removes most problems of modern bankin such as;

- There's no limit to the funds to be transferred.
- It's very hard for your accounts can be hacked.
- There's no central point failure such as banks in the case of modern currency.

Understanding cryptocurrencies

Cryptocurrency is quite similar to real-world currency, just that it does not have any physical existence, nor can it be seen, touched, or felt. Cryptocurrencies are a system that promotes secure online payment without any risk involved. These are termed “virtual tokens,” which can be used to buy regular goods and services or as an investment, same as other assets such as stocks, shares, precious metals like gold, silver, and platinum.

Although purchasing cryptocurrencies is quite exciting, it can be risky as well if one does not invest a fair amount of time in researching before buying the cryptocurrency.

What is “crypto” in cryptocurrencies?

The word “crypto” refers to cryptography, a method to secure your data in the presence of a third party by using encryption or decryption. There might be a case when third parties want to steal your data through unconventional sources. Cryptography is a method that uses the computational algorithm to protect the data from third-party ill intent.

What makes cryptocurrency so special?

The global economy is rapidly moving towards a digital world where paper currency and coins won't be needed. And why not, as cryptocurrency is the newest and most promising addition in the digital ecosystem. Over the last few years, cryptocurrency has been rapidly getting attention and is on the top of everyone's mind for all good reasons.

Below we have mentioned five reasons that make cryptocurrency so special. Let's have a look.

1. Since cryptocurrency is decentralised, there's no intervention from the government or banks, which makes it nearly fraud-proof.
2. When cryptocurrency is created, the transactions are carefully stored in a public ledger, minimising the risk factor.
3. The sole reason why cryptocurrency is in everyone's mind is instant settle-
