

has risen from \$7,000 to \$26,000, whereas Ethereum, which was at \$130.27 at the beginning of the year, is now more than double. Although, it was not the first time that Bitcoin or other cryptocurrencies witnessed a massive rise. The same thing happened in 2017 when it jumped unexpectedly.

Predictions for the future

Will Bitcoin crash one more time like it did in 2018? Well, this is a question that everyone who wants to invest in cryptocurrency thinks about. However, such a possibility is less as investors are now well-informed.

The 2017 spike happened due to individual investors who rushed to invest, but the situation is much different as insulation has started to embrace Bitcoin and altcoins.

The Risk

If you think all is well and there are only rainbows and unicorns in your way, then that's not 100 percent true as every coin has two sides, and so do cryptocurrencies. While optimists have high hopes for a bright future, analysts spot endless risks in the coming future that cannot be ignored.

Out of all the risks, Bitcoins can be exceptionally volatile. Apart from Bitcoin, the altcoins have a higher volatility rate as fewer people are investing in them when compared to bitcoin.

We have now presented both sides of the coin, and now, it's up to you to come up with a reliable conclusion. What do you think will happen to cryptocurrency a decade from now? Share your thoughts with us at editor@digit.in.

Conclusion

Cryptocurrencies can be volatile, but they are the future of the digital ecosystem. With well-thought decisions and superior understanding, one can easily tackle the existing flaws of cryptocurrency. **d**
