

3. Smart contracts

Smart contracts or a set of rules are stored in blockchain, which is automated. This contract involves information like terms for travel insurance, conditions for corporate bond transfers, and so on.

Benefits of Blockchain

In today's era where everything is on the digital platform, blockchain is one step that can bring a revolution. Decades ago, when the internet was first introduced, it was something very novel, but today, none of us can imagine our lives without the internet. It is being said that blockchain is here to bring a bigger revolution than the internet.

Let's take a look at the benefits of blockchain

- **Greater trust**

As a member of blockchain, you can rest assured that you are receiving accurate and timely data, and your data is 100% confidential in the blockchain records. Note, records will only be shared with members the account holder grants permission to. Trust is believed to be the blockchain's most cited benefit, which attracts maximum users and drives healthy relationships.

- **Decentralised structure**

In addition to enabling trust, blockchain allows sharing data in an ecosystem with no third-party involved or intermediaries included.
