

world, India is not behind. Below are some of the startups and companies working on DeFi in India.

- **Instadapp**

The first on the list is Instadapp, one of the most prominent platforms based upon Ethereum. Instadapp provides users as well as developers a single point of intersection to understand DeFi protocols. It is a world-first, most advanced platform that aims to drive interoperability for easy app development.

- **Nuo**

The second on the list is Nuo. Founded by Varun Deshpande, Ratnesh Ray and Siddharth Verma in 2018, it is a platform working on DeFi application that unites borrowers and lenders by employing intelligent contracts. The firm recently launched Juno, an online banking platform based upon Ethereum and Nuo protocols. The company is based in Mumbai.

Conclusion

Decentralised finance or DiFi is still in a developing stage, and there's a long way to go. Though the results it may show are substantial, it is vital to understand that most DeFi tokens do not carry liquidity, which is a significant drawback in the digital market. The DiFi infrastructure is still full of gaps leaving backdoors open for scams. Although tricks and tips are used to cover the gaps, there still are multiple questions that need to be worked upon for DeFi to become a sustainable choice for the masses. **d**
