

Although it is set to “OFF”, it is usually recommended to check.

- Reboot the rig.

Conclusion

You can mine with any ETH wallet address, although certain exchanges do not allow mining or very modest deposits. That's why double verify with the site if you are mining directly to a website address. Just make sure that the account you use is compatible with mining. GPUs are so much quicker than CPUs that it is no longer lucrative or worthwhile to mine. For mining, even entry-level GPUs are roughly 200 times quicker than CPUs So use them and have a great time mining! The above details will help you to understand all the ways of configuring and setting up the tools in your PC for efficient working.
