

Cryptocurrency continues to gain popularity – whether it's because of its great volatility or the promise of large returns. These virtual currencies are a relief to individuals who were worried about losing money in the market during the start of the coronavirus outbreak, as well as a mystery to new investors.

People can obtain the crypto currency Ethereum in one of two ways: directly through internet exchanges or through mining with high-powered computer rigs.

The process of creating new crypto coins by solving complicated mathematical equations is known as crypto mining. When a person buys a cryptocurrency, the transaction is recorded on a distributed ledger known as the blockchain. However, the process is only complete when a “miner” confirms that the transaction is valid.

Miners are competing against one another to solve difficult equations. Those that complete the task first are compensated with a portion of the
