

GPU mining software

EquiHash, CryptoNight, and Ethash are three of the most popular mining programs, based on the algorithm they use. Ubiq, Ethereum, and a slew of other projects use Ethash. Because they all use the same algorithm (ethash), they can all be mined with the same mining software. The top miner is Phoenix Miner.

Everything You Need to Know About the Superlative Mining Software - Phoenix Miner

The foremost Ethereum miner right now is the Phoenix Miner. It has the ability of dual mining with several other altcoins, which can increase your return by 20-30% in exchange for a 20% increase in power consumption. Even if your electricity is pricey, the extra earnings are likely to be worthwhile.

A developer fee is included in all miner software. This means that your miner mines for the developer for a few seconds per hour with a charge. When mining ethereum, Phoenix miner charges a fixed fee of 0.65 per cent (the lowest to date) or a 1 per cent fee during dual mining processes.

Setting up the Phoenix Miner

Download the Phoenix Miner. Extract it to a directory. To start the mining process, you need to have a mining pool. Ethermine was the most popular pool up until recently. They altered the minimum payout to 0.1 ETH not
