

long ago. Additionally, it introduced a 1% mining charge. On the other hand, Binance Pool charges 0.5 per cent and pays every day, irrespective of how small the mined amount is. Furthermore, using Binance, converting the wallet's ETH to BTC in case a BTC payment is to be made on a website is incredibly simple.

To use Binance for mining, you need to have an account at Binance Pool. The process to create an account in Binance Pool is straightforward, and you will have a mining account username. Make a new text file in the directory where you retrieved Phoenix. In the text file, insert: `PhoenixMiner.exe -pool stratum+tcp://ethash.poolbinance.com:1800 -pool2 stratum+tcp://ethash.poolbinance.com:25 -wal USERNAME.USERNAME`

Save the file with the “.bat” extension. To begin the mining process, double-click. In your Windows Startup folder, you may also create a shortcut to the stored file.

Note: You need to have an ETH Wallet address to store the mined coins while using Ethermine, unlike Binance, which accumulates the mined coins in your account itself. To create an ETH wallet and have a wallet address, download MetaMask Chrome Extension.

Ethereum mining pool & ETH wallet

The selection of a mining pool depends entirely on your current location as it varies the ping aspect. Your mining pool should be dependent on your current location. Preferably proceed with the pool that is nearest to your location. Subsequently, you can create your own ethereum address to get your ethereum shares. By searching the mining pool with your address, you can see all the statistics.

Keep in mind that you will only ever need to write an ETHEREUM wallet address, not a bitcoin or any other address. Using exchange platforms like Bitfinex or Bittrex to establish an ethereum wallet and keep it safe is the easiest approach. They will provide great security, and you will be able to employ Two Factor Authentication to add an extra degree of protection. Offline wallets, such as Trezor Bitcoin Wallet, are always safe and recommended for large amounts.

Dual Mining

Ethereum is mined solely through the use of your GPU's memory, hence the GPU's core is essentially unaffected by the process of ethereum mining. This facilitates the usage of GPU core for mining other coins at
