

better support for mining compared to Windows. But, this isn't true.

LINUX has several issues, including outdated systems with poor support, overclock tools that are difficult to find, issues with GPUs that are complex to detect, hash rate, and power draw, among others. On the other hand, Windows, when set up properly can run for months without needing any reboot. Moreover, on Windows, you can similarly monitor your rigs in the same way as you can on SMOS or EthOS.

Optimising Windows

Your Windows 10 pro is virtually up to date if you downloaded it from the official Microsoft website. Remember, always choose authenticity.

- Proceed to the Control Panel.
- Go to Security and Updates.
- Go to the Windows Update website.
- Check for updates and make sure you have the most recent ones installed.

Software and Drivers

.NET Framework 3.5 Offline Installer (latest version) is required to run Polaris 1.6 and OverdriveNtool. The 4.x Framework is included with Windows 10, but that will not function with Polaris or OverdriveNtool.

The .NET 3.5 framework must be manually installed. Set the USB Disc Drive as the Source for installing .NET 3.5 after inserting the Windows 10 USB.
