

- Click “Change” on the “Virtual Memory” option at the bottom of the page.

 1. Uncheck the column “Automatically manage paging file size for all drives”.
 2. Check the “Custom size” box.
 3. You’ll need to increase the virtual RAM depending on how many GPUs you have. In general, each GPU requires 3 GB of virtual memory. So, if you have 6 GPUs, you’ll require 18 GB of virtual memory.
 4. Type 2000 MB x GPU Count in the “Initial size (MB)” field (12000 MB for 6 GPU mining rigs, 24000 MB for 12 GPU).
