

and undervolting. No other programme gives you complete control over your GPU and allows you to improve it easily. You can't be sure the overclock/undervolt settings are correct 100 per cent of the time. This is a unique piece of software that offers you complete control over your AMD GPUs, and it's fairly simple to use once you understand the basics.

Using OverdriveNtool

To many this software might seem complex. Follow the steps listed below for an easy understanding of OverdriveNtool.

- Run the .exe file of OverdriveNTool.
- Study the factory settings of AMD video cards.
- Add the needed acceleration values and record values in the OverdriveNTool.ini profile file.
- Configure the file to and include it in autorun.

When you launch OverdriveNTool and choose the drop-down menu, you'll get a list of all the video accelerators installed on your system, including ones that the programme doesn't support:
