

In this FastTrack, we aim to do exactly that. We're starting off the booklet with a primer on how things have changed over the last couple of years, followed by some basics on what Blockchain really is, and then, we dive into crypto. We'll show you the different means by which you can obtain cryptocurrencies, be it by purchasing from an exchange or by mining it yourself. And if you're oblivious to the concept of mining, then we'll help you figure out how to build your own mining setup, how you can identify which crypto currencies to mine, and if you're a little tuckered out, we've even put together a list of popular coins that are being mined as we speak.

And of course, with investments, there's always the taxman who comes calling. For that, we delve into the legalities of investing in Crypto with a focus on Indian law, in its current state. Hopefully, by the end of this FastTrack, you'll get a very good idea of what cryptocurrencies are, how you can obtain them, and if you do, how you can properly sort out taxes for the same.

Like every month, we're open to suggestions for topics for FastTracks and we're eager to hear your feedback. Drop us a line at editor@digit.in and we'll be waiting.
