● Cryptocurrencies in which investors can invest

Based on personal choice and ability to take the risk, individual preferences to buy cryptocurrencies can differ. Investors can analyse the history of each cryptocurrency. The goodwill of the cryptocurrency is a prime factor in this case.

Bitcoin, the world's first decentralised cryptocurrency, is known as the longest-standing cryptocurrency. Though the price fluctuates rapidly, it is still considered a good option for investors. For instance, the worth of Bitcoin in April was \$63,576, but it decreased to \$29,971 within a couple of months.

Ethereum is another good option for investors. Though it is based on the concept of Bitcoin, it is considered the most actively used blockchain.

Cryptocurrencies can be divided. Investors can buy in small amounts instead of buying a single cryptocurrency of large volume.

● Things to know after buying cryptocurrencies

Private key is responsible for access to the cryptocurrency while buying, selling and transferring it. The investors should not reveal private keys anywhere. No company will ever ask for it. The key helps to provide security and proves the identity of the owner. Investors must choose a complex password to reduce the probability of hacking. For many cryptos, highly
