

- **Don't expect to avoid tax**

Investors should be careful while paying tax from the profits gained from cryptos and must not ignore it. Short term profit is always taxable. To avoid tax, investors always prefer long term investment. Cryptos are like capital assets for RBI.

- **Authentic platforms is a must**

Try to invest via authentic platforms. Though investing through overseas platforms is good, they charge higher taxes. Authentic platforms ensure that in case of setbacks, money can be recovered.

- **Buy cryptos in segments**

Investors should not buy a large number of cryptos. They can break the large amount into \$ 10 or \$ 100 to buy a cryptocurrency. According to Mark Cuban, if investors want to make a long-term investment, they can buy cryptos frequently in small amounts.

- **Verify random tips before trusting**

Similar to the stock market, the crypto market is also prone to volatile manipulation. Often, false rumours are spread to increase their reliability and obtain a mass transaction on that currency. This pump-and-dump trick raises the value of the currency and can engulf your assets, too.

Conclusion

To become an expert in investing through cryptocurrency requires experience and vision. Investors cannot expect immediate profit. Such investments create new opportunities and, at the same time, may prove to be dangerous as its market value fluctuates continuously. Our readers may follow the criteria we have covered in this article to learn investment through cryptocurrency.
