

4. ZebPay
5. UnoCoin

These are reliable exchanges that are trusted by millions of Indians. They also support the Indian payments infrastructure like the UPI and other third-party apps like Google Pay, PhonePe and PayTM. These enable the user to easily credit and debit money directly from the linked bank account.

The process for registering at the exchanges is straightforward. The sign-up time is about 5-10 minutes. As per the government, there is no existing law for trading of cryptocurrencies. However, these exchanges follow KYC procedures for Aadhaar Card and PAN Card so as to ensure that their platforms are not being misused for money laundering. The verification process takes 24-48 hours for verification. Post-verification, any user can trade with cryptocurrencies from across the world.

Recent developments in cryptocurrency regulations in India

A recent event organised by the Blockchain and Crypto assets council (BACC) under the Internet and Mobile Association of India (IAMAI) was held on 7th September. The chief guest of the event Mr. Jayant Sinha, who is the chairman of India's Parliamentary Standing Committee on Finance, said that India will take a unique stand on the crypto regulations and will not hamper the current interests of the public investors. A feature of full account convertibility allows users to exchange the national currency with any foreign currency without any cap on the amount. Furthermore, he stated the two main agendas of the bill considering the diverse set of challenges faced by India as follows:

- The main area of focus for the government is the concern over national security. The government realises the need for strong vigilance against the misuse of cryptocurrencies to fund and finance terror activities and crime.
- The Indian crypto market will strive to achieve a balance between stability and growth while keeping the country's prospects in mind.

The government is planning to launch the first digital currency by December through a trial program. The concept of the digital rupee has been there for quite some time. It has stepped up the efforts to look into digital currencies and cryptocurrencies for the past growing year, given the growing interest among the public in this domain and the declining interest in cash usage. The current agenda also includes decision-making on how the digital rupee could affect the current monetary policy and cash in circulation.

The RBI is exploring the option of DLT (Distributed Ledger Technology), which refers to a digital database that allows multiple participants to access,
