

share and record transactions. The centralised ledger is a database owned and operated by a single entity.

At the same event, the former governor of the Reserve Bank of India, Rama Subramanian Gandhi, said that the same rules as that of commodity exchanges should apply to cryptocurrency. He also added that the regulators and tax authorities should be aware of an individual's cryptocurrency investments and holdings. The same information should be shared with exchanges. The government is working with NASSCOM towards implementing the regulatory framework.

The government also ensured trust among citizens that cryptocurrencies are safe as an investment and are subject to market risks similar to mutual funds and stock investments. It is the young generation and new investors who

are fuelling the growth in the crypto space. The new opportunities to invest are attracting users even from Tier 2 and Tier 3 cities in India. This adoption of crypto is seen as a huge positive step towards the Government's vision of Digital India. The day is not far away when we see an impressive adoption of cryptocurrency among citizens and its wide acceptance as a mode of payment. The upcoming cryptocurrency regulatory framework will bring a lot of positive impacts in the cryptocurrency domain. Cryptocurrency should not be spread as a get-rich-quick scheme but has to be traded and invested with maturity and complete knowledge of the ecosystem to gain the best profits. **d**
