

Today, in this chapter, we will give you an in-depth view of the top 50 cryptocurrencies which are ready to bring a revolution in the coming years. So without wasting any further time, let's quickly dive in!

## Top 50 cryptocurrencies list

### 1. Bitcoin

Satoshi Nakamoto created a digital cryptocurrency popularly known as Bitcoin in 2009, which revolutionised the digital market. She described the project as an electronic peer-to-peer cashless system without the interference of government and other operation bodies.

### 2. Ethereum

Introduced in 2013, Ethereum is a decentralised open software platform that builds a range of decentralised applications. After Bitcoin, Ethereum holds the second position in market capitalisation.

### 3. Ripple

First released in 2012, Ripple is a two-in-one technology that acts as a digital payment network and cryptocurrency to canary financial transactions. Most people believe Ripple does not have a long way to go.

### 4. Tether

Also known as a stable coin, Tether is a type of cryptocurrency which is responsible for maintaining stable cryptocurrency values. Investors mostly use Tether to avoid the extreme volatility of other cryptocurrencies.

### 5. Polkadot

Commonly known as a 'blockchain of blockchains' or multichain, Polkadot is an open-source platform that connects all different blockchains, which promote group working and faster transfer of data. This chain of the network improves communication and pools security.

### 6. Cardano

Cardano was founded in 2015 by Ethereum co-founder Charles Hoskinson. Cardano is an open-source, public blockchain platform that was introduced to improve the interoperability, scalability and sustainability of cryptocurrencies.
