

these four points can be the basis of privacy rights and on the agenda of privacy advocates at a larger level. For example, in the Indian context, when it comes to the law, there is no mention of the word privacy as a defined concept. Still, the courts have interpreted the constitutional articles in ways to which they have upheld the Right to Privacy as a fundamental right.

What is all the fuss about?

The growth of the internet has brought in a striking change in the way that we share information. The generations before us used to send one letter a month, or one letter every six months to their near and dear ones, but now, we share six stories a day on social media to tell the world what we are doing. This has opened up a lot of opportunities for people to not only distribute information but also see to it that it is reaching a large section of the population. Money transfers, which used to take days, now happen in literal seconds, and government documental applications which had to be written by hand can be typed, submitted and processed, all with the click of a few buttons. But, in this jungle of information, there are a lot of predators who have made their way through the safety nets to intrude on the lives of unsuspecting individuals who are on the internet but often find themselves falling prey to these individuals and groups who are out there to steal information.
