You can't imagine how they use your data

The people on the internet who are on the lookout for your data to be used to their advantage are literally countless, and so are the ways in which they use your data when they get hold of it. The activities using consumer data can range from manipulating the opinions of large sections of the population to financial scams. Here we have listed some ways in the past which will help you understand the ways in which data theft can affect you if you are subjected to it.

Robbing your personal belongings from your home

There are countless stories of thieves using social media status and story updates to steal stuff from people's homes. The way this works is, that people often add unknown people on their social media accounts, or set their posts to be visible to everyone, so your posts and anything you post

It can't get worse
