

circle of call and email spam. So, it is better to keep your information safe and secured. It is not only you that would be affected in certain cases; anyone who is a part of your mailing contact list would also be flooded with messages and calls. So, if not for yourself, make sure you are doing the right thing for your friends.

Your information and data becomes vulnerable

Every bit of your information that gets online becomes vulnerable to attacks the moment it gets there. So, it is better to only post things onto the internet when absolutely necessary. Earlier in the chapter, we have already told you about how data breaches are increasing every day. So, by uploading your information on the internet, you make yourself open to becoming one of the statistics of the next big breach. Even the most secure facilities on the internet are not secure. It does not mean that the internet is a bad place, but reckless behaviour over there also has consequences, as it does in the real world, so tread carefully and try to follow most of what is there in the following chapters.

They are listening

You must have heard about how there have been instances of smart home speakers like the Echo and Google Home listening in on conversa-

Hey Assistant, are you safe?
