

tions. It is pretty straightforward that when operating such devices and having them in your home and active all the time requires a lot of care and awareness.

Never good to have an eye on you all the time

No matter how public your life is, constant monitoring can cause a lot of harm in ways in which you would not be able to think about. These days whenever you log on to the internet to use a service as simple as YouTube,

It looks like they walked on the puppy trail 5 times last Saturday! Note that.

your activity is logged in by the service host. While it may not always be for malicious intent by the organisation or company collecting your data, the fact that your usage patterns are being stored in some place, which is a prime target for all sorts of online attacks is something that you would never want. This is what makes protecting your online data very important.

We all share what is happening in our daily lives on the internet, but certain checks and measures are necessary to make sure that we are in control of what the companies on the other side of the internet are collecting and storing. Being on a monitored internet connection is like living in a world where you have a tracking device attached to your body, which monitors what you do. In your day-to-day functioning, it might cause any hindrance and would go unnoticed, but you never know what is used against you when.
