

There must have been instances where you searched for a product just out of curiosity, and the next thing you know is that your advertisement feed is full of ads pertaining to the products or service that you searched about. You never made a social media post about it, but still ads start coming in. This shows in the simplest ways that whatever you do on the internet is constantly being looked into and tracked. And that is not a good thing to have especially in the world where despite the best efforts of protecting data banks and data centers, leaks happen left right and centre.

Cambridge Analytica

The name Cambridge Analytics sounds familiar right? And there is a very high probability that most of you reading this would already be familiar with what went down in 2018 and how both Facebook and Cambridge Analytica came under fire for collecting and using the data of Facebook without their consent. This is an old story and the specifics have been talked about a bazillion times on the internet. The thing that is of our interest here is the way in which the profiling was done of Facebook users.

The creators out there must be familiar with the concept of analytics and how it helps them fine tune the content that they put out. Now, take this concept and imagine a scenario where in a similar fashion, your psy-

They used FB data for straight up psychological profiling
