

The Basics

The bare minimum that you should put into practice to manage your online presence effectively.

Don't change your password too frequently

You read it correctly. Contrary to popular belief, changing passwords often is not necessary. You should only be changing your passwords to counter any suspicious activity or data breach where you know that your important information like passwords have been compromised. When you keep on cycling through passwords at a rapid pace, what may end up happening is that you might end up with a password that is not as strong as the previous one, and at times even predictable.

There is an excellent utility on the internet, called [haveibeenpwned](http://haveibeenpwned.com), which lets you know if your contact number or email address was leaked along with any other related information in a data breach. So, make sure
