

the name of the spider that has been sharing the room with you for years now. One of the password managers that offers a good set of features for free and is available across platforms is LastPass.

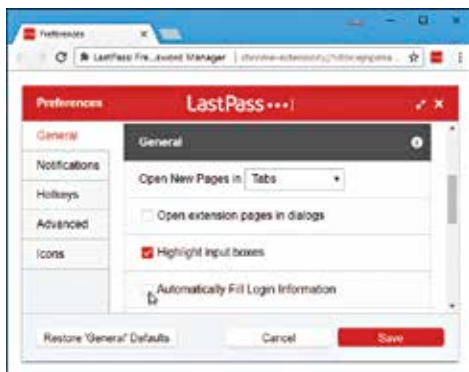

Setting Up Last Pass

On Smartphone:

1. Download and install the LastPass app.
2. Click on Sign Up if you do not have an account.
3. Enter the required details.
4. Set your master password (this will be used to access your LastPass account).
5. Next, you will be prompted to set up biometric authentication, depending on your phone model, if needed, click the enable button and authenticate.
6. When you click go to vault on the next screen, you would be prompted to enable autofill feature. Make sure you enable that. Depending upon the model of your phone, you will be prompted to grant certain permissions. Do that.
7. On the app home screen, click on the red circle button labelled using the + sign to add your credentials.
8. Select the type of credential from the list that is prompted, fill in the details and you will be set to go!

Once you have configured the application and added credentials for the relevant web pages/applications, whenever you visit a webpage, whose credentials are stored in the app, it will prompt a small dialog box asking you to auto fill the password using LastPass. Click on that, and you will have your password filled in.

LastPass also lets you add to your vault things like secure notes, bank account details and insurance policy details, amongst a host of other
