

things. You can also generate secure passwords to be filled into various applications/login ids.

On web browser (Google Chrome):

1. Go to the Chrome Web Store and search for the LastPass extension.
2. Select and install. Make sure that the developer of the extension is labelled to be LastPass.
3. Once the extension is installed, you will be redirected to the login page for LastPass, where you can sign into your existing account or create a new one. The process is almost the same as the mobile app.
4. The extension will prompt you to add your first set of credentials, using a pop up on the top right corner of your window. Click on any one of the services you want to add your credentials of, or else click remind later.
5. When on a webpage, click on the LastPass extension button in the Chrome menu bar, choose the credentials to be filled in. LastPass will fill in the required details into their respective fields.

You can also share your vault with people you want to. For doing this, go to the LastPass web page on any device, log into your account and locate the option labelled as sharing center. When in there, click on the small red circular button with a + sign in the middle. In the dialog box that opens, enter the recipient's email address, and the

LastPass dialog box in Chrome

item that you would like to share. Once done, click on the share button and the recipient would receive the details you shared with them. In the same menu, you can find all the credentials or LastPass information that has been shared with you too.
