

Leave no footprint behind

Learn how to cover your tracks on the Internet

Most social media platforms and services that you use on the internet save and track your information in some way or the other. With increasing frequency of wrongful use of information and data breaches, it has become exceedingly important to investigate and change privacy settings of all the services that you use. This residual data that is stored in your computer and on the servers of the services that you use, which helps them identify who you are is called your digital footprint.
