

One of the best definitions of digital footprint, as given by Netsafe.org.nz, is “Your digital footprint is the trail of ‘electronic breadcrumbs’ you leave behind when you use the internet. It can include the websites you visit, the photos you upload and your interactions with other people on social networks.” We have picked some popular services and listed what you can do to make sure that your data is secured to the best of your knowledge on these platforms.

Protect your data on Facebook

Facebook

One of the biggest social media platforms active, Facebook, has also been in the center of many instances where its actions were brought under scrutiny. We won't be diving deep into the events that have brought Facebook's reputation for user data management at the level that it is right now. We are here to look at the tools and settings that you can look at to make sure your data on Facebook is protected and limited to the people of your interest.

To do this, one of the best tools that is available, is the Facebook Privacy checkup. (<https://digit.in/FBprivacy>) This is a profile scanning test of sorts, designed by Facebook, to make sure that certain basic aspects of your profile are in place or not. We recommend that you take this test as the first measure of defence against potential attacks on your Facebook
