

to run periodic checks of your friends lists to see whom to keep and whom to remove.

4. Curate your feed and information:

It does not matter who is posting what. You should post the information that you feel comfortable sharing. You can delete anything that you posted earlier and now do not want anyone to see.

5. Edit the audiences of your posts

Just like the profile sections, there is a set of options that allows you to choose who is getting to see what you post on Facebook. You can choose a default setting which is applied to every post you create or choose manually for each post.

Safeguard your Google account

Google and related services

You would have seen those advertisements that come on every page you visit, which show you exactly what you want and are run by Google. Sometimes those advertisements are so accurate that it almost seems like Google just reads your mind! It is not some sort of prophecy that they are practicing. It just follows you around, and tracks whatever you do, collects the data, and feeds it to the AI, which makes predictions, which even the most trained human brains can't. It might not look that big of a thing, given that in most cases the data is being sent off to be stored in some of the most secure servers, but not to forget, even the safest places are prone to attacks.
